

COFFEE CONNECT SITEMAP

Base on Techopedia's definition, a sitemap is a website's content designed to help both users and search engines navigate the site. It is also a hierarchical list of pages organized by topic, an organization chart or an XML document that provides instructions to search engine crawl bots.

Sitemap is also integral when it comes to making the website application, as the Sitemap serves as the blueprint for developers when creating the actual website application.

For the Coffee Connect sitemap, it is created using Lucid Chart online application. As seen in the figure below, the main page is the Home page that will contain a spotlight area for the Events and important notice. Pictures of the product, blog posts, Coffee Connect logo and fb page logo that can be redirected to Coffee Connect's FB page.

The homepage will have five sub-pages, Coffee, Blogs, Customer Reviews, Events and About Us. The Coffee page will contain all Coffee Connect's product wherein the customer can see the product's description and has the option of ordering the product. Next is the Blogs page that will contain the Blog articles about Coffee Connect. The customer reviews page will contain all customer's review about the product while the Events page will contain the promo announcements or events that Coffee Connect will be holding, and lastly, the About Us page will contain the profile and a short message from the owner.

The website application will also have three databases in total. One read database for the blog entries and two write database for the order form and customer reviews.

COFFEE CONNECT SITE MAP
